```

Lord Rama is a major deity in Hinduism and is considered one of the most important figures in Hindu mythology. He is the seventh avatar of the Hindu god Vishnu. According to the Hindu epic, the Ramayana, Lord Rama was a king of Ayodhya, a city in ancient India. He was born to King Dashara and Queen Kaikeyi. The story of Lord Rama is as follows:

- * Lord Rama was exiled to the forest for 14 years by his stepmother, Queen Kaikeyi, who wanted her own son, Bharata, to become the king.
- * During his exile, Lord Rama's wife, Sita, was abducted by the demon king Ravana, who took her to his kingdom in Lanka (modern-day Sri Lanka).
- * Lord Rama, along with his brother Lakshmana and the monkey god Hanuman, embarked on a journey to rescue Sita and defeat Ravana.
- * After a long and arduous battle, Lord Rama defeated Ravana and rescued Sita, and then returned to Ayodhya to become the king.

Lord Rama is revered for his many virtues, including:

- * His unwavering commitment to duty (dharma) and righteousness
- * His unshakeable loyalty to his family and friends
- * His bravery and selflessness in the face of adversity
- * His compassion and kindness towards all living beings

Lord Rama is often depicted in Hindu art and literature as a handsome and powerful warrior, with a bow and arrow in his hand. He is considered a role model for all individuals, and his story is seen as a guide for living a virtuous and righteous life.

It looks like you are running Gradio on a hosted Jupyter notebook, which requires `share=True`. Automatically setting `share=True`.

Colab notebook detected. To show errors in colab notebook, set debug=True in launch()

* Running on public URL: <https://d937e614ea3d7e7165.gradio.live>

This share link expires in 1 week. For free permanent hosting and GPU upgrades, run `gradio deploy` from the terminal in the working directory.

exit

It seems like you're exploring the concept of mental health and well-being, particularly in relation to the definition provided by the World Health Organization (WHO). You're also touching on the idea that individuals are influenced by their social and physical environments, and how this can impact their mental health.

The vulnerability-stress working model developed by Asarnow et al. (2001) is a valuable framework for understanding how ongoing stress can contribute to the development of mental illness, such as depression. It's interesting to note that depression is a diagnosable disorder that is on the rise, according to the WHO (1996).

I'd like to acknowledge that the term "depression" is often used in everyday language to describe a range of emotions and experiences, ↓ ↑ all of which may meet the criteria for a clinical diagnosis. This can sometimes lead to confusion or stigma surrounding mental health.
